

SWALFSOFT

Product Details:

Swalfsoft is a Web Application. It is provide easy transaction among the Clients. It mainly used to maintain a swalfgroup information and also clients status.

Web Application

Technology Used: PHP & MYSQL

1. PHP manages freeing all resources. Users does not required to free file handle resource, database resources, memory, etc, unless programmer need to free resource during script execution.
2. Support for traits has been added.
3. Binary number format has been added, e.g. *0b001001101*.
4. Improved parse error messages and improved incompatible arguments warnings.
5. The session extension can now track the upload progress of files.

Description:

Each and every Group or subgroup has more record. So it is not easy for searching one particular record. So that we can implements a different search method. It can be sort out the group, subgroup and client. This sort out techniques can reduce the time and effectively search a group, sub group and Client details. It has more than 1000 member. We had provided option to send email to all clients or for only selected clients. It can able to send an email with more than 1000 client at

a time. The Email function is very useful to maintain up to date swalf status and reduce a manual works.
